4, 6 and 8 Tank Systems can be configured like this for wall space saving purposes. These systems use what we call a CENTIPEDE HEADER. Access to the valve is from the side and room must be left on both sides to work on them.

**Space Requirements:**

- 4 Tank System: 48” x 62”
- 6 Tank System: 48” x 77”
- 8 Tank System: 48” x 92”

If the CENTIPEDE HEADER is installed to run parallel with the wall, room must be left between the wall and the tanks for access to the valves.
